

Two design choices keep an evolving ecosystem GPU-native

A Dynamic life cycles in static organism slots

Fixed capacity: 32 slots (8 shown)

↓ death: mask off

↑ birth: reuse slot

alive[slot] → node / edge / hinge activity masks

constraints

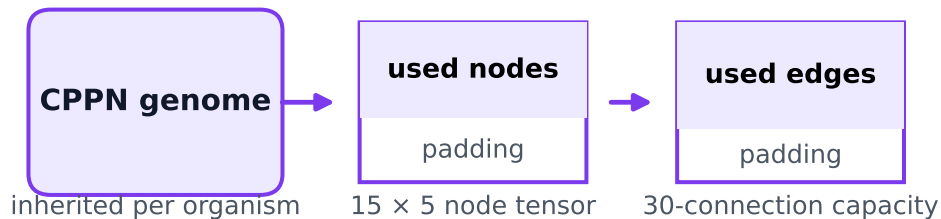

steric + fluid

resources

controller

**Biology changes occupancy and state,
not array shape**

B Variable CPPNs in padded fixed-size tensors

**Trusted TensorNEAT mutation changes
parameters or topology at birth**

**Variable graphs, fixed shapes,
and batched GPU inference**
